

Acme Platform: SLA, Disaster Recovery, and Cloud Operations

Document Version 3.4 | Classification: Public / Customer Facing

1. Service Level Agreement (SLA) & Uptime Commitments

Acme provides a 99.95% Monthly Service Availability commitment across all production core services.

If monthly availability falls below 99.95%, customers are entitled to tiered service credits:

- 99.0% to 99.94%: 10% monthly service credit
- 95.0% to 98.99%: 25% monthly service credit
- Less than 95.0%: 50% monthly service credit

Scheduled maintenance windows are announced at least 5 business days in advance and executed during off-peak hours.

2. Support Tiers and Incident Escalation SLAs

Critical (Severity 1): Core platform offline or critical data corruption. Initial response in 15 minutes.

High (Severity 2): Major feature impaired with no operational workaround. Initial response in 1 hour.

Medium (Severity 3): Normal support inquiry or minor feature bug. Initial response in 4 hours.

Low (Severity 4): General technical questions and documentation requests. Initial response in 1 business day.

3. Disaster Recovery and Business Continuity Architecture

Our infrastructure is deployed across AWS us-east-1 (Primary) and AWS us-west-2 (Secondary) Availability Zones.

Recovery Point Objective (RPO): 15 minutes for all database transaction logs and object buckets.

Recovery Time Objective (RTO): 1 hour for automated DNS failover and compute cluster reconstitution.

Automated cross-region backups are taken continuously and full snapshot restores are tested every 6 months.

Chaos engineering simulations and regional failover drills are conducted annually by the SRE team.

4. Change Management and CI/CD Governance

All production releases follow a canary deployment strategy with automated rollback on error threshold triggers.

Zero-downtime database schema migrations are enforced through backward-compatible expansion phases.

Emergency hotfixes require explicit VP of Engineering sign-off and retrospective post-mortems within 48 hours.
